

Warsaw University of Technology

Faculty of Power and Aeronautical  
Engineering

# **CATALOGUE OF COURSES**

**Graduate studies (M.Sc. degree)**  
**TOK 2006**

Warsaw 2011

## FIELDS OF STUDIES AND SPECIALIZATIONS

The graduate studies last 3 semesters and conclude with the Master of Science degree. They are offered in two specializations. Please see the table below:

| <i>Field of Studies</i>      | <i>Specialization</i> |
|------------------------------|-----------------------|
| <b>Aerospace Engineering</b> | Aerospace Engineering |
| <b>Power Engineering</b>     | Power Engineering     |

The program of M.Sc. studies is the same for all specializations during the first two semesters. The studies within a particular specialization can be launched when a sufficient number of students have been admitted by the Dean of the Faculty.

Heads of specializations:

- Aerospace Engineering – prof. Cezary Galiński
- Power Engineering – prof. Tadeusz Skoczkowski

## Regulations of Studies

Students must comply with the „Regulations of Studies of Warsaw University of Technology” accepted by the University Senate. Please see the following sections for more details.

Dean of the Faculty decides in matters not specified by the Regulations.

## Course of studies

From the second semester students must design an individual study plan for next semesters, which includes the obligatory courses, especially the specialization courses that must be repeated, and possibly the courses included in the program for higher semesters of studies.

When designing the individual study plan for the next semester, students must decide on:

- Electives - if included in the programme. There is no separate list of electives. An elective can be any course which is not included in the programme of other fields of studies given in English. Dean of the Faculty approves optional electives, e.g. lectured by the Visiting Professors.
- Division and subject of intermediate projects.

- Division and scope of diploma seminar. The seminar provides knowledge and skills required in diploma project preparation.
- Division and subject of diploma project. The division is the same as in case of diploma seminar.

Students can also select from a range of foreign language or physical education courses.

Individual study plan for the next semester must be prepared according to the prerequisites given in the catalogue, i.e. courses which must be completed before the beginning of the current course.

After each semester, the student performance is assessed and the registration procedure for the next semester is performed. At the end of the study program all the requirements for graduation must be fulfilled.

### **Registration procedures for each semester**

#### ECTS Credit System

During each course a certain number of ECTS points are earned in accordance with the course significance, difficulty and the student workload required. The total number of credit points that can be earned for all courses in each semester is 30.

#### Evaluation System

1. At the end of each semester, students obtain one final grade for each course (regardless of the course division into lectures, tutorials and laboratory work).
2. The grading scale starts with a failing grade 2 and consists of five passing grades: 3, 3<sup>1/2</sup>, 4, 4<sup>1/2</sup>, 5.
3. In exceptional cases, students may obtain “condition” *N* final grade, which means that the student performance during the semester is evaluated positively, but the student is not allowed to take the final exam (due to valid reasons). The lecturer defines the procedures in case of “condition” *N*. This grade obliges the student to complete the course by the end of the following semester the latest, so that he does not need to repeat it and pay extra fee. If the student fails to complete the course during the following semester, the course must be repeated. Consequently, the student is obliged to cover the costs of the course repetition according to University Regulations. There are no credit points for “condition” *N*.

#### Requirements for registration for each semester

1. In order to register for the next semester, students are required to have a sufficient number of credit points as given in the table below.

| <i>M. Sc. Programme</i>     |      |    |    |
|-----------------------------|------|----|----|
| Registration for semester   | VIII | IX | X  |
| Number of collected credits | 16   | 48 | 80 |

2. Students who fail to collect the required number of points are removed from the study programme, with the exception of the last two semesters of studies, for which the student can re-register.
3. Students must repeat the failed course during the next available semester. Courses can be repeated twice. Students who fail to complete the course three times will be removed from the Faculty. Students are obliged to cover the costs of course repetition according to University Regulations.
4. Dean can approve student sick leave or leave of absence. First year students may obtain sick leave only.
5. In some cases, the Dean can grant a student who is on the leave, the right to take certain courses "in advance".
6. Duration of graduate studies must not be longer than nine semesters. In case the student is granted the leave, duration of studies is prolonged accordingly.
7. Surplus credit points accumulated during B.Sc. studies are not transferred to M.Sc. studies. The M.Sc. studies always begin with zero credit points.

### **Requirements for graduation**

Requirements for graduating with the M.Sc. degree are as follows:

- Completion of all courses in the M.Sc. study program,
- 4-week internship (in industry)
- Collecting 90 ECTS points including the preparation of M.Sc. thesis
- Writing M.Sc. thesis and passing the final exam.

The final grade for the completed study program is an average of grades received for each course. Failing grades are not included in the average.

$$\text{Average grade} = \frac{\sum_{i \in Z} g_i \cdot O_i}{\sum_{i \in Z} g_i}$$

$Z$  – number of completed courses,

$g_i$  – number of ECTS points allocated to the course,

$O_i$  – grade for the course.

Final examinations are held four times a year – in January, March, June and October.

### **Brief study schedule**

Brief study schedule includes information on the course title and the number of hours per semester and week. Information about a course division into lectures, tutorials, laboratory work and projects as well as the number of credit points can be found in a table for each semester.

Complete information about courses can be found in the last part of the catalogue on courses contents.

### **LEGEND for the list of courses (following pages)**

In the following section the list of courses is given, divided into suggested sequence during standard semesters of study.

In each semester the standard set of courses gives 30 ECTS points. In the case the required (named and specified) courses do not fill standard 30 ECTS points – then ELECTIVE courses should be taken in the amount summing the semester load to 30 ECTS. Compare remarks on elective courses in the section "Course of Studies".

In the headers of tables the following abbreviations/acronyms are used:

- Lc – Lecture**
- T – Tutorial**
- Lb – Laboratory**
- P – Project**
- S – Seminar**

Date 03.06.2011

### Prerequisites:

Fluid mechanics 1 (ANW122) , Heat transfer 1 (ANK423) , Thermodynamics 1 (ANW116) , Thermodynamics 2 (ANK412) , Thermodynamics 3 (ANK413)

### Contents - short:

Knowledge of complex, conjugated heat transfer modes in turbulent fluid flows, two-phase fluid flows, flow through porous media and during phase change. Knowledge of basic equipment used for heat transfer, thermal properties of materials and their measurement.

### Bibliography:

- 1) A. Bejan: "Heat Transfer", John Wiley & Sons, Inc.
- 2) A. Bejan, A.D. Kraus: "Heat Transfer Handbook", John Wiley & Sons, Inc.
- 3) M. Kaviany: "Principles of Heat Transfer in porous Media", Springer
- 4) K. D. Hagen: "Heat Transfer with Applications" Prantice- Hall, Inc.
- 5) J.R.Mahan: "Radiation Heat Transfer", John Wiley & Sons, Inc
- 6) Materials for students placed on website

### Course results:

After completing his course the students will be able to solve complex problems in heat transfer and select heat exchangers for particular applications.

### Grading criteria:

solution of two complex problems in heat transfer

### Detailed contents:

Lecture:

1. Methods of measurement of heat fluxes and temperature visualisation (infra-red thermography, liquid crystals thermography, thermocolours).

Date 03.06.2011

2. Thermal contact resistance.
3. Heat transfer in turbulent and two-phase flows.
4. Heat transfer with phase change (solidification, frost formation, icing).
5. Heat transfer in porous media and suspensions.
6. Thermal insulations and protection against high and low temperatures.
7. Heat exchangers and heat pipes.
8. Radiation in transparent and semitransparent media.

Tutorials:

1. Examples of calculation of temperature distribution and heat transfer during turbulent flows.
2. Examples of calculations of temperature distribution and heat transfer during two-phase fluid flows.
3. Examples of calculations of temperature distribution and heat transfer and during fluid flow in porous media.
2. Application of effectiveness and NTU methods in heat exchangers.
3. Examples of calculation of radiative heat transfer in transparent and semitransparent media.

Date 03.06.2011

## SYLLABUS

Course name: **Advanced Renewable Energy Sources**  
Course name in other language:  
Short name: **ARES**  
Course number: **ANS534**  
Course language: **English**  
Responsible for the course: **prof. dr hab. inż. Roman Domański**

|                  |              |                  |                            |
|------------------|--------------|------------------|----------------------------|
| ECTS:            | <b>3</b>     | Number of hours: | [ Lc, T, Lb, P, S ]        |
| Course level:    | <b>basic</b> | weekly:          | [ <b>2, 1, 0, 0, 0</b> ]   |
| Form of grading: | <b>Exam</b>  | by semester:     | [ <b>30, 15, 0, 0, 0</b> ] |

|                   |                          |   |                       |
|-------------------|--------------------------|---|-----------------------|
| Field of Study:   | Field of Specialization: | Study level:  | Recommended semester: |
| <b>Energetyka</b> | <b>Power Engineering</b> | <b>undergraduate,<br/>full time , graduate<br/>studies, full time</b> | <b>2, 6</b>           |

### Prerequisites:

Heat transfer 1 (ANK423) , Heliotechnika 1 (NS516) , Termodynamika (ZNW116)

### Contents - short:

Teaching evaluation of renewable energy. Evaluation of implementation possibilities for renewable energy, evaluation of environmental threats related to energy storage and conversion processes, feasibility of individual technologies of renewable energy storage. Presenting new and future renewable energy technologies.

### Bibliography:

Materials for students placed on website

1. IEA: World Energy Outlook, OECD/IEA, 2006
2. Duffie J.A., Beckman W.A.: Solar Engineering of Thermal Processes, John Willey&Sons, 2006

### Course results:

After passing the subject student will be able to analyze renewable energy resources and needs for storage systems. Understand relation between the renewable and fossil and nuclear energy conversion systems, understand the limits for renewables.

### Grading criteria:

60% multiple-choice test carried out at the end of the lectures, 40% homework grade.

Own work:

Homework done in teams of 2-3. Subject and form of work (paper, calculations) determined at the beginning of a semester.

### Detailed contents:

Date 03.06.2011

Basic terms related to energy conversion processes. World's energy resources (fossil fuel and nuclear) versus renewable energy sources. The basic parameters for energy storage. Energy conversion efficiency for selected processes and devices. Possibility of energy storage. Renewable sources; sun as an energy source, conversion of solar radiation energy (collectors and photovoltaic systems). Solar systems for heating and hot water production. Biomass and biofuels – in energy and transportation sector. Solar power plants. Solar energy for heating and hot water generation. Wind energy and wind power generation. Energy of waters and oceans (tidal and wave energy conversion), OTEC. Geothermy – geothermal systems, prospective hot dry rock technologies. Heat pump. Geothermy in Poland. Hydrogen as an energy carrier, hydrogen production by renewables. Examples of renewable energy conversion systems for heat and power generation. Place for renewable in world energy scenario. Prospective power generation technologies using the renewables. Typical solutions of waste utilisation used in power engineering. Rationalization of energy consumption, increase of energy conversion efficiencies. Renewables energy sources versus environment protection.

**Additional remarks (by course staff):**

Lecture based on Power Point presentations

Date 03.06.2011

### Prerequisites:

Theory of heat machines (ANK405)

### Contents - short:

Power plant scheme as modeling object. Conservation laws of mass, energy and momentum. Review of software which is suitable for power plant evaluation, optimization and case analysis. Practical utilization of the software.

### Bibliography:

1) N/A

Further Readings:

1) N/A

### Course results:

Experience in advance power plant modelling and optimization.

### Grading criteria:

45 minutes for modelling the Gas Turbine Combine Cycle

### Detailed contents:

1. Introduction
2. Engineering software review
3. Rotating equipment models
4. Heat transfer models
5. Piping models
6. Control theory models
7. Chemical reactors models

Date 03.06.2011

## 8. Optimization procedures

### Contents - short:

The course aims at introducing students basic concepts of business law. Firstly students are familiarized with basic concepts of jurisprudence, introduction to constitutional law, sources of Polish and European business law. The course covers basic concepts of civil and commercial law, including property law, contracts, intellectual property law partnerships and companies. The last part of course concerns administrative aspects of conducting business activities including: registration in the National Court Register or in the Economic Activity Records; different forms of restrictions: concessions, regulated activities and permissions and finally basic concepts of labour law, competition law and tax law.

### Bibliography:

1. M. Możdżeń-Marcikowski, Introduction to Polish Administrative Law, C.H. Beck, Warsaw 2009;
2. J. Jabłońska-Błońska, Introduction to Law, LexisNexis, Warsaw 2008;
3. R. Lewandowski, Polish Commercial Law: An Introduction, C.H. Beck 2007.

### Course results:

After completing his course the students will be able to understand and prepare basic contracts. He will distinguish between different forms partnerships and companies. He will be able to set up a business and find basic information about business units in the National Court Register. He will have basic notions about different forms of job contracts and taxation.

### Grading criteria:

Multiple choice test

### Detailed contents:

1. Introduction to jurisprudence. Basic concepts
2. Constitutional Law
3. Sources of Polish and European business law
4. Civil Law (1) – general provisions

Date 03.06.2011

5. Civil Law (2) – property law
6. Civil Law (3) – contracts
7. Civil Law (4) – intellectual property law
8. Partnerships
9. Companies
10. The National Court Register & the Economic Activity Records
11. Concessions, Regulated Activities and Permissions
12. Labour Law
13. Competition Law
14. Introduction to tax law
15. Test & Assessment

Date 03.06.2011

### Contents - short:

Knowledge about methods and tools of computational fluid dynamics

### Bibliography:

1. Hirsch, Charles, Numerical computation of internal and external flows, 2007
2. Versteeg, Henk Kaarle, An introduction to computational fluid dynamics, 2007

### Grading criteria:

2 tests on theoretical part, work and progress of each student are evaluated in the framework of the point system, individual semester project

### Detailed contents:

Basic models in fluid mechanics. Conservative versus non-conservative formulation. Basic discretisation methods for model equations (boundary and initial conditions, stability, CFL condition, Godunov barrier). General algorithms for nonlinear problems (pseudo-time iterations, frozen coefficients, quasi-linearisation). Simulation of incompressible flows (stream-function vorticity formulation, projection method and artificial compressibility). Finite volume method for compressible flows. Flux-vector splitting technique. Modelling of shock-waves. Basic information on spectral methods.

### Additional remarks (by course staff):

The laboratory groups can consist of at most 12 students

Date 03.06.2011

| <b>Energetyka</b> | <b>Power Engineering</b> | <b>graduate studies, full time</b> | <b>1</b>              |

### Prerequisites:

Electric Power Systems (ANK381)

### Contents - short:

- To understand world's and EU energy resources, supply and demands.
- To understand the ongoing changes in global energy markets, including EU internal energy market.
- To gain general knowledge on energy policy of the EU and Poland.
- To understand the transformation to sustainable energy systems.
- To learn the modern concept of energy security.
- To understand fundamentals of electricity reform and competition in electricity markets.
- To get familiar with main trends in energy research and promotion.
- To gain in-depth knowledge on energy law in Poland.
- To understand legal regulations concerning environmental impact of energy sector.
- To understand legal status of distributed generation.

### Bibliography:

- Jaccard M.: Sustainable Fossil Fuels, Cambridge University Press, 2005.
- Kleinpeter M.: Energy planning and policy, John Wiley & Sons, 1995.
- Toward sustainable energy future, OECD/IEA, 2001, <http://www.oecd.org/bookshop>
- World Energy Outlook, International Energy Agency, Paris.

#### Further Readings:

Selected readings from OECD/IEA and Energy Charter Secretariat websites (provided by lecturer).

### Course results:

- Understanding of the process of globalisation in the world's energy market.
- To get familiar with objectives of the energy policy of the European Commission.
- Ability to understand business processes in energy market and market law regulations.
- Ability to understand the EU energy law and environmental law influencing energy processes.

Date 03.06.2011

- Ability to understand Polish energy law and main decrees related.
- Ability to understand main research trends in the EU.
- Ability to recognise benefits, driving forces and barriers to distributed generation.

**Grading criteria:**

Tests in lectures+final assessment.

**Detailed contents:**

1. Energy general. Role of Energy. World's Energy Resources. World's Energy Forecasts. Energy Trends in the EU. EU Energy Priorities. EU Targets for 2020 and Beyond. EU Internal Energy Market. EU External Energy Relations. Energy Policy in Selected Countries (USA, China, India, Russia, Brazil). Global Energy Investments. Nuclear Option. Development of RES Energy. Role of Energy Efficiency. Climate Change Impact. International Energy Agency. Global strategic petroleum reserves. Energy Charter Treaty. International Atomic Energy Agency.
2. Sustainable energy policy. Sustainable Development Concept. Definition of Sustainable Energy Policy. Clean Energy. Sustainable Energy Systems Attributes: Energy Efficiency. RES Penetration. Climate Impact. Low Carbon Technology Drive. Costs of Energy Technologies. Fossil Fuels in Sustainable Systems.
3. Security of supply. Definition of Security of Supply. Energy Dependence of EU. Security of Supply in Electricity and Gas Markets. Investment Decisions. Policy Tools: Capacity Mechanism and Price Cap. Green Paper on Security Of Supply. Trends in IES Countries. Collective Energy Security. Generation: Investments. Reserves and Fuel Mix in Liberalized Markets. Role of Prices and Market Structure. Role of Governments. Transmission: Current Investments Needs. Transmission Congestion. Cross-Border Interconnections. Planning. Development and Ownership. End-Use Efficiency. Case Studies.
4. Electricity reform and competition in electricity markets. Background To Electricity Reform. Electricity Directive 2003/54/EC. Stranded Costs. Unbundling. Electricity Markets: Spot Markets. Power Exchange. Pool. Capacity Mechanism. Financial Markets. Networks: Network Regulations. Managing Congestion. Setting Price Levels. Regulation. Institutional Frameworks. Operators in Investments. Institutions and Policy Framework. Impact of Electricity Market Liberalization on Generation Costs: Market Liberalization. Transparency of Public Policy Objectives and Costs. Allocation of Risk. Investment Costs. Operation and Maintenance Costs. Investments in Power Generating Capacity. Investments Under Competition. Investment in Energy Sector. Latest EU Legislative Proposals.
5. Energy research and promotion. Energy in EU Framework Programs. SET-Plan. Intelligent Energy Europe Program.
6. Energy law in Poland. Energy Sector in Poland. Energy Policy of Poland. Energy Law. Objectives. Scope. Built-In Mechanisms. Main Provisions. Duties of the Energy Sector. End-User Position. Penalties. Role of the President of the Regulatory Office. Feed-in Tariff. Green Certificates. Red Certificates. Weaknesses. Main Decrees to Energy Law. Tariff Decree. Connection Decree. Energy Efficiency Law. Objectives. Main Provisions. White Certificates. Energy Efficiency Financing. NEEAP. Development of Nuclear Law. Competition Law.
7. Environmental impact of energy sector. Energy Related Environmental Directives: IPPC, LCP. Environmental Accounting GHG Emission Reduction. EMAS. ISO 1400. EN 16001. Best Available Techniques. Environmental Protection Law. Climate Change. Importance of Climate Change. Kyoto Protocol And Post-Kyoto. Kyoto Experience. UNFCCC. Climate Change EU Action Plan. Climate Change and Carbon Trading Mechanism. Carbon Trading Mechanisms and Complementary Measures. Flexible Mechanisms. Joint Implementation. Clean Development Mechanism. Emission Trading Mechanism. EU

Date 03.06.2011

Emission Trading System. EU Demand Side and Energy Efficiency Measures. Carbon Market Activity. Nuclear Safety.

8. Legal status of Distributed Generation (DG). Definitions of Distributed Generations (DG). DG Technologies. Res. Small CHP. CHP Directive. Economics of DG. DG Level Playing Field. Policy Issues. Barriers. Regulation Electricity Markets Covering DG. Energy Companies in DG Markets. Development of DG. Renewables. RES State. RES Development. RES Directives. National Renewable Energy Action Plans. RES Financing. RES in Selected Countries.

Date 03.06.2011

| <b>Energetyka</b> | <b>Power Engineering</b> | <b>graduate studies, full time</b> | <b>1</b>              |

### Prerequisites:

Business Law (ANK371) , Economics (ANW112) , Electric Machines 1 (ANK333) , Electric Power Systems (ANK381) , Environment protection (ANW109)

### Contents - short:

- To gain general knowledge on energy efficiency policy in the EU and Poland.
- To get familiar with variety of energy efficiency measures applied in industry.
- To understand fundamentals of energy management systems and energy audits methodology.
- To learn the objectives and methods of the Demand Side Management.
- To get familiar with the protocol on energy measurement and verification, including statistical approach to measured data.
- To understand basic economics of energy efficiency.

### Bibliography:

1. Reddy B.S., Assenza G.B., Assenza D., Hasselmann F.: Energy efficiency and climate change, SAGE, 2009.
2. Selected EU directives, available at <http://eur-lex.europa.eu/en/index.htm>
3. Swisher J.N., Jannuzzi R.M., Redlinger R.Y.: Integrated Resource Planning, UNEP, 1997.
4. Third Party Financing, Energy Charter Secretariat, <http://www.encharter.org>
5. Financing Energy Efficiency, Energy Charter Secretariat, <http://www.encharter.org>
6. International Performance Measurement and Verification Protocol. Concepts and Options for Determining Energy and Water Savings, Volume 1. Efficiency Valuation Organization, <http://www.evo-world.org>

### Course results:

- Understanding of objectives, advantages and barriers of implementation of energy efficiency policy in industry.
- Being familiar with general methods of improving energy efficiency in industry.

Date 03.06.2011

Ability to understand and be able to select proper energy measure to be applied in industry.  
Being familiar with fundamentals of standard energy management systems.  
Understanding methodology and practical methods of measurement and verification of energy savings in industry.  
Ability to assess economic advantages of typical energy efficiency measures and investments.  
Ability to assess uncertainty of measurements and verification of energy savings.

**Grading criteria:**

Tests in lectures+final assessment.

**Detailed contents:**

1. Energy efficiency basic. Basic Concepts Related to Energy Efficiency. Fundamental Definitions. Energy efficiency measures. Role of Energy Efficiency in Economy and Environment Protection. Statistics of energy efficiency. Benefits of Energy Efficiency. Barriers to Energy Efficiency. Legal. Institutional. Financial. Technological. Energy Prices. Diversity of Stakeholders. Potential of Energy Efficiency. Technical. Economic. Market
2. Energy efficiency policy in EU. Energy Efficiency in EU Sustainable Energy Policy. Energy Efficient Scenarios. Strategic EU documents: Green Paper on Energy Efficiency. Energy Efficiency Action Plan. Climate Change Program. EU directives on energy efficiency e.g. CHP Directive, Building Performance Directive, Eco Design Directive, Emission Trading Directive, Energy Services Directive, Home Appliances Directives, Taxation of Energy Products Directive, Gas Directive, Electricity Directive. Energy Efficiency in Emission Trading Scheme. BAT on Energy Efficiency. Exemplary Role of the Public Sector. Energy Efficiency and Renewable Energy Sources. Involvement of the Energy Sector. Perspective in the EU.
3. Energy efficiency law in Poland. Energy Law. Energy Efficiency Law. Secondary legislation. Thermomodernisation Law. National Energy Efficiency Action Plan (NEEAP).
4. Energy efficiency measures. Obligatory and voluntary approach. Long Term Agreements. Role of Companies and Sector Chambers. Energy Services. White Certificate System. Outsourcing. International Standardization and Harmonization. Minimal Energy Efficiency Regulations. Energy Management Systems. Standard EN 16001. Relations Between Different Certificates Schemes. Green Procurement. Energy Fund. Carbon Fund. Energy Conduction Codes: Energy Star, Motor Challenge, Green Buildings, Climate Change Commitments, Green Light. Public Campaigns. Benchmarking. Information and Labeling. Integrated Resource Planning. Definitions. Projections of the End-Use Energy Demand. Fundamentals of Electric Power Planning. Least-Cost Planning Criteria. Electricity Production Costs. Smart metering. Intermittent Renewable Sources. Demand Side Management. Load Curve. Baseline. Energy Pricing. Electricity Tariffs and Energy Efficiency Program Costs. DSM Cost Effectiveness. Case Study. Supply and Demand Sides Integration. Electricity Production Costs. Supply System Integration. Supply Resources Screening. Dispatch Strategies. Supply-Side Loss Reduction. Intermittent RES. Combining DSM and Supply Resources Options. Ranking the Resources Options by Marginal Costs.
5. Energy audits. Methodology for energy auditing. Choosing the Calculation Level. Collecting Data. Unitary Gross Annual Energy Savings. Total Gross Annual Energy Savings. Total ESD Annual Energy Savings. Total ESD Annual Energy Savings for Lifetime. Savings Measurements and Verification. International Performance of Measurements and Verification Protocol. Requirements for Energy Audits and Energy Auditors. Accreditation and Certification Schemes for Energy Auditors. Energy Manager and Energy Auditor. Energy Auditors Trainings. Harmonised Top-Down Calculation Model. Harmonised Bottom-Up Calculation Model. Savings Lifetimes. Monitoring and Reporting. Regular Inspection, Commissioning and Decommissioning.

Date 03.06.2011

6. Energy efficient technologies. Concept of Clean Energy. Generation. Review of energy efficient technologies. Transport of Energy. End Use of Energy. Energy Efficiency in Electronics and Information and Communication Technologies. Energy Storage. Costs of Technologies.

Date 03.06.2011

### Contents - short:

Analysis of energy losses, based on the combination of the First and Second Laws of Thermodynamics, when applied to various thermodynamic processes occurring in heat machines. Fundamental concepts and theory of mass transfer phenomena and concurrent heat and mass transfer processes, their occurrence in nature and applications in technology.

### Bibliography:

1. Y.A. Cengel and M.A. Boles, "Thermodynamics, An Engineering Approach", Sixth Edition, Mc Graw Hill, Boston, 2008.
2. Y.A. Cengel, "Heat and Mass Transfer: A Practical Approach", Third Edition, Mc Graw Hill, Singapore, 2006.
3. F.P. Incropera, and D.P. DeWitt, "Fundamentals of Heat and Mass Transfer", John Wiley & Sons, Inc., 1998.
4. A. Bejan, "Convection Heat Transfer", John Wiley & Sons, Inc., 1984.

### Course results:

After completing the course a student will be able to identify main sources of energy loss in various heat and mass transfer systems, and to perform an elementary quantitative analysis needed for the quality assessment of energy and mass transfer phenomena in various parts of power plant installations.

### Grading criteria:

Two problem solution tests during the course (mid-term tests) and a theoretical test at a final exam. All tests must be passed and a final grade is an arithmetic mean of all tests evaluations.

### Detailed contents:

Lectures: Fundamental mechanisms of energy transfer. Application of the First and Second Laws of Thermodynamics in the quality assessment of energy transfer phenomena – a review of irreversible processes. Examples of mass transfer in nature and technology. Fundamental concepts and transfer

Date 03.06.2011

mechanisms of a mixture component. Molecular diffusion and its one –dimensional practical models (plane wall and cylindrical geometry, transient mass diffusion, equimolar counter-diffusion, Stefan flow). Convective mass transfer - forced and natural convection, the boundary layer theory, mass convection empirical relations. Analogy of heat, mass and momentum transfer, Chilton-Colburn analogy and its practical application. Simultaneous heat and mass transfer - examples

Tutorials: Calculations of power losses in selected irreversible processes - such as fluid flow with friction, heat transfer, gas mixing, Joule's effect and combustion occurring in pipes, valves, combustion chambers, heat pumps, internal combustion and turbojet engines. Computation of diffusive and convective mass transfer, using one-dimensional analytical models, empirical relationships and Chilton-Colburn analogy in various processes, such as the waste utilisation, steel carbonizing, humidification and drying of air and other media, NO<sub>x</sub> propagation in the atmosphere and thermal convection around a body of a complex geometry (calculation of convective heat transfer coefficient).

**Additional remarks (by course staff):**

Handouts will be provided

Date 03.06.2011

### Prerequisites:

Mechanics of structures 1 (ANW117) , Mechanics of structures 3 (ANK428)

### Contents - short:

The course supplies the basic knowledge and skills required for understanding FEM and simple practical applications of the method. It consists of the theoretical part (30 hours of the lectures) and the practical ones (15 hours of the finite element modelling using ANSYS program).

### Bibliography:

Lecture notes

Bijak-Żochowski M., Jaworski A., Krześciński G., Zagrajek T.: Mechanika Materiałów i Konstrukcji, Oficyna Wydawnicza Politechniki Warszawskiej, Warszawa, 2006

Zagrajek T., Krześciński G., Marek P.: Metoda elementów skończonych w mechanice konstrukcji, Oficyna Wydawnicza Politechniki Warszawskiej, Warszawa, 2006

Cook R. D.: Finite Element Modeling for Stress Analysis, John Wiley & Sons , 1995

Saeed Moaveni: Finite Element Analysis. Theory and Application with ANSYS, Paerson Ed. 2003

### Course results:

After completing the course the students will be able to build simple FE models and will understand the applications and limitations of the method in stress analysis.

### Grading criteria:

Assesment based on 2 tests and the results of computer lab (the reports)

Date 03.06.2011

**Detailed contents:**

Lectures: Approximate methods – Finite Element Method, Finite Difference Method, Boundary Element Method. Approximate solutions of 2D Poisson equation. FEM versus Ritz method. Bars, beams, trusses and frames. Basic relations in 2D and 3D stress analysis. Typical algorithms of FEM in static linear stress analysis, popular commercial FE software packages. Accuracy of FE analysis.

Laboratory: Introduction to practical problems of FE modeling in ANSYS, 2D and 3D linear stress analysis, analysis of a simple shell structure.

Date 03.06.2011

### Contents - short:

Review of future power technologies

### Course results:

Basic knowledge about possible ways of future development of power engineering

### Grading criteria:

Final test

### Detailed contents:

Advanced power engineering system for central and distributed generation and supply of energy. Ultra supercritical parameters for steam systems gas-steam sets, coal gasification, fluidized bed combustion, fuel cells, hybrid systems and others

### Additional remarks (by course staff):

All course info available on <http://energetyka.itc.pw.edu.pl>

Date 03.06.2011

| <b>Lotnictwo i Kosmonautyka</b> | <b>Aerospace Engineering</b> | <b>graduate studies, full time</b> | <b>2</b>              |

### Contents - short:

Solution of a given problem and the elaboration of a short report on the subject of performed work.

### Bibliography:

Books and textbooks, scientific journals, the Internet.

### Course results:

Gaining the ability: to solve problems, perform selection of relevant literature, choosing research methods, presentation of obtained results and its critical analysis.

### Grading criteria:

Evaluation criteria: problem statement, literature overview, problem solution and its written presentation.

### Detailed contents:

Detailed contents depend on the topic and the nature of work (design-prototyping, computational, experimental).

### Additional remarks (by course staff):

The scope of work is terms to consultation between the student and his individual supervisor. The topic must be consistent with study programme and specialisation.

Date 03.06.2011

|---------------------------------|--------------------------|------------------------------------|-----------------------|
| Field of Study:                 | Field of Specialization: | Study level:                       | Recommended semester: |
| <b>Energetyka</b>               | -                        | <b>graduate studies, full time</b> | <b>3</b>              |
| <b>Lotnictwo i Kosmonautyka</b> | -                        | <b>graduate studies, full time</b> | <b>3</b>              |

### Contents - short:

Gaining skills of information gathering and its critical analysis; learning presentation skills.

### Bibliography:

Books, textbooks, scientific journals, the Internet

### Course results:

Gaining the ability of information gathering, and performing its critical assessment (especially concerning information obtained from the Internet). Learning how to prepare short and concise presentations and how to present in limited time. Learning how to defend a thesis in front of an audience.

### Grading criteria:

The elements that are subject to evaluation include: the quality of collected information, quality of elaborated analysis, especially the critical discussion of collected data, and quality of the given presentation. It is recommended that the presentation is conducted during a student group meeting, and the students should contribute to its evaluation.

### Detailed contents:

It is recommended that the subject is completed in two steps:

1. Collecting materials on the given subject with the aid of all available information sources: including books, textbooks, journals and the Internet. The collected material must be analysed and summarised in the form of a short report containing references to the literature sources used. This part should be conducted under the supervision of the advisor and its progress must be controlled during individual meetings. An important part of this stage is a critical analysis of the collected material and its relation to the knowledge gained during studies. It is required to use both domestic and international source materials.

Date 03.06.2011

2. Work presentation. Results presentation must be performed in front of a bigger audience during a student group seminar. Each of the students will be given 10-15 minutes of presentation time, followed with questions stated by the seminar participants. This stage is considered preparation to the upcoming thesis defense.

**Additional remarks (by course staff):**

The seminar should be prepared under the supervision of a scientific supervisor. It must follow the diploma thesis themes. The seminar should match the area of studies programme and specialisation.

Date 03.06.2011

## SYLLABUS

Course name: **Master Diploma Thesis**  
Course name in other language: **Przygotowanie pracy dyplomowej magisterskiej**  
Short name: **MDT**  
Course number: **ANW137**  
Course language: **English**  
Responsible for the course: **prof. dr hab. inż. Paweł Pyrzyński**

|                  |                 |                  |                            |
|------------------|-----------------|------------------|----------------------------|
| ECTS:            | <b>20</b>       | Number of hours: | [ Lc, T, Lb, P, S ]        |
| Course level:    | <b>advanced</b> | weekly:          | [ 0, 0, 0, <b>15</b> , 0 ] |
| Form of grading: | <b>Exam</b>     | by semester:     | [ 0, 0, 0, <b>45</b> , 0 ] |

|                                 |                          |                                    |                       |
|---------------------------------|--------------------------|------------------------------------|-----------------------|
| Field of Study:                 | Field of Specialization: | Study level:                       | Recommended semester: |
| <b>Energetyka</b>               | -                        | <b>graduate studies, full time</b> | <b>3</b>              |
| <b>Lotnictwo i Kosmonautyka</b> | -                        | <b>graduate studies, full time</b> | <b>3</b>              |

### Contents - short:

Synthesis of engineering knowledge acquired during first and second degree studies. Gaining the ability of solving the given problem and preparing the report.

### Bibliography:

Books, textbooks, scientific journals, the Internet

### Course results:

Gaining the ability: - to solve the research problem, - perform selection of relevant literature, - choosing research methods, - presentation of obtained results and its critical analysis.

Detailed specification depend on the topic of work.

### Grading criteria:

The promoter and reviewer verify the realisation of task given to the student, they fill out the thesis assessment forms. With positive evaluation the student is permitted to diploma defence, the final grade is decided by the commission.

### Detailed contents:

Detailed contents depend on the topic and the nature of work (design-prototyping, computational, experimental).

### Additional remarks (by course staff):

The scope of diploma work is terms to consultation between the student and his individual supervisor. The topic must be consistent with study programme and specialisation

Date 03.06.2011

The elaborated thesis report is evaluated. The student is permitted to attend the diploma exam (and the diploma defence) if he/she completed the required study programme and the other requirements specified in study regulations are fulfilled.

Date 03.06.2011

### Contents - short:

Artificial neural networks – theory and application in process modeling

### Bibliography:

1. Masters T., "Neural Networks"
2. Pham D.T., Liu X.,; Neural Networks for Identification, Prediction and Control, Springer Verlag, 1995
3. Kantardzic M., Data Mining, Wiley-IEEE 2002

### Course results:

Basic knowledge of process modeling and computer systems (applications)

### Grading criteria:

Midterm and final exam. Final grade based on achieved number of points

### Detailed contents:

Theoretical fundamentals of neural networks.. Types and structures of ANN. Application of artificial neural networks in process modeling. Examples of NN modeling process in power installation – MPC type controllers with NN models, NN for sensor validation, forecasting using NN. Practical modeling using ANN. Advantages and constrains of NN application

Date 03.06.2011

| ECTS:            | <b>3</b>                   | Number of hours: | [ Lc, T, Lb, P, S ]                 |
| Course level:    | <b>basic</b>               | weekly:          | [ <b>2</b> , 0, <b>1</b> , 0, 0 ]   |
| Form of grading: | <b>Continous assesment</b> | by semester:     | [ <b>30</b> , 0, <b>15</b> , 0, 0 ] |

|                   |                          |                                    |                       |
|-------------------|--------------------------|------------------------------------|-----------------------|
| Field of Study:   | Field of Specialization: | Study level:                       | Recommended semester: |
| <b>Energetyka</b> | <b>Power Engineering</b> | <b>graduate studies, full time</b> | <b>1</b>              |

### Prerequisites:

Fluid mechanics 1 (ANW122) , Heat transfer 1 (ANK423) , Partial differential equations (ANK481)

### Contents - short:

Fundamental knowledge of contemporary computer simulation techniques in fluid mechanics and heat transfer (such as control volume method and finite element method) and training in application of these methods to engineering problems (with the use of selected commercial codes, such as Ansys Fluent and/or Fidap)

### Bibliography:

1. C. Hirsch, „Numerical computation of internal and external flows”, second edition, John Wiley & Sons, Chichester, 2007.
2. S.V. Patankar, „Numerical heat transfer and fluid flow”, Mc Graw-Hill, 1980.
3. H.K. Versteeg and W. Malalasekera, „An introduction to computational fluid dynamics. The finite volume method”, second edition, Pearson Prentice House, London, 2007.
4. O.C. Zienkiewicz, R.L. Taylor and P. Nithiarasu, „The Finite element method for fluid dynamics, sixth edition”, Elsevier, Amsterdam, 2005.
5. R.W.Lewis and
6. Y. Yaluria and K.E. Torrance „Computational Heat Transfer”, Hemisphere, 1986

### Course results:

After completing the course a student:

- will be able to understand underlying assumptions, basic methodology and limitations of all consecutive stages of computer modelling of a real engineering problem;
- will be familiarized with all details of FEM and CVFDM simulation of heat transfer and fluid flow problems, and, in particular, with major difficulties encounter in such modelling of both: a pure molecular diffusion (e.g. in composite materials) and convection (e.g. wiggles, cross-wind diffusion, numerical

Date 03.06.2011

dispersion), as well as with special techniques of numerical errors elimination or reduction (e.g. up-winding, staggered grid approach, un-equal order FEM, grid refinement);

- will be able to use and modify, for his/her particular engineering problem to be solved (e.g. through the User Defined Functions), commercial codes applied for both: grid generation and calculations;
- will be able to correctly interpret obtained numerical results, in particular, to distinguish between potential numerical inaccuracies and specific features of the analysed physics.

#### **Grading criteria:**

An assessment consists of two parts: (1) a final theoretical test of the knowledge acquired during lectures; (2) a practical test in the lab.

A final grade comprises 60% of the theoretical test grade and 40% of the laboratory test evaluation.

#### **Detailed contents:**

Lecture:

1. From reality to its computer simulation - successive stages of a model development.
2. Mathematical model of incompressible fluid flow and heat transfer – integral and differential conservation equations.
3. Methods of a geometrical domain discretization.
4. Review of contemporary numerical methods in heat transfer and fluid flow – Control Volume Finite Difference Method (CVFDM), Finite Element Method (FEM).
5. Solving steady-state and transient diffusion on control volume and finite element grids.
6. Special numerical techniques for convective-diffusive transport – upwind schemes in CVFDM and FEM.
7. Error analysis of computer simulation – consistence, stability, convergence, accuracy estimation on a grid of a moderate density.
8. Review of effective computational algorithms in CVFDM and FEM modelling of incompressible fluid convection.
9. Solution methods for linear algebraic equations – a review.
10. Introduction to turbulence modelling.
11. Credibility of a computer simulation – verification and validation, examples of credibility assessment.

Computer Lab:

1. Introduction to ANSYS Gambit – step-by-step division of 2D complex domain into control-volumes, structural and non-structural grids, types of domain and boundary conditions, application of advanced functions in a local mesh refinement.
2. Introduction to ANSYS Fluent – mesh diagnostics, boundary and initial conditions, material properties, solver settings, graphical post processing, User Defined Files.
3. Examples of modelling with the code Fluent: 3D natural thermal and/or solutal convection, thermal radiation, convection in porous media, and/or heat transfer in a turbine blade.

#### **Additional remarks (by course staff):**

handouts will be provided.

Date 03.06.2011

### Contents - short:

Provide the students with the basic types of PDE's, methods of solving PDE's and their applications. Basic applications can be illustrated during laboratories.

### Bibliography:

Peter O'Neil, Advanced Engineering Mathematics, Wadsworth Publishing Company, USA.

### Course results:

After completing the course the students will be able to specify the type of PDE, solve it, interpret the solutions and implement them in practical problems.

### Grading criteria:

60% final exam, 40% continuous assesment based on tutorial work.

Practical work: e.g., Project/laboratory classes, where students will design and implement a simple poblems in PDE's

### Detailed contents:

1. Fourier analysis
  - a) the Fourier series of a function; applications to forced oscillation and resonance;
  - b) the Fourier integral, sine and cosine integrals; Computer calculations of Fourier coefficients;
  - c) Fourier transforms: definition; properties; calculation.
2. PDE's of the first order: the existence of a local solution; linear PDE's; quasi-linear PDE's and their geometrical interpretation.
3. Derivation of the wave and heat equation and types of problems.
4. The d'Alembert Solutions of the wave equation.

Date 03.06.2011

5. The Fourier series Solutions of the wave equation.
6. The wave equation for semiinfinite and infinite strings.
7. The Fourier series Solutions of the heat equation.
8. The heat equation for semiinfinite and infinite regions.
9. Bessel functions.
10. The Fourier – Bessel solutions for boundary value problems.
11. Power series method in PDE. The method of Frobenius.

Laboratories: application of Mathlaba for solving PDE's and visualization of solutions.

Date 03.06.2011

## SYLLABUS

Course name: **Physics 2**  
Course name in other language: **Fizyka 2**  
Short name: **PHYS2**  
Course number: **ANW132**  
Course language: **English**  
Responsible for the course: **dr Piotr Lesiak**

|                  |              |                  |                            |

| Field of Study:   | Field of Specialization: | Study level:                       | Recommended semester: |
| <b>Energetyka</b> | <b>Power Engineering</b> | <b>graduate studies, full time</b> | <b>2</b>              |

### Contents - short:

The course contains basics of relativity and wave optics.

### Course results:

After completing his course the students will understand the basics of the relativity and the optics. This knowledge gives them possibility to project simple optics components and units.

### Grading criteria:

The final written exam will be cumulative over all material covered during the semester. (grade: 100% exam)

### Detailed contents:

#### RELATIVITY

Time Dilatation

Length Contraction

The Lorentz Transformation

Relativistic Energy and Momentum

#### OPTICS

Review of Electricity and Magnetism (Gauss' Law, Ampère's Law, Faraday's Law, Maxwell's Equations, The Wave Equation)

Plane Waves in Isotropic Media

Energy Flux (Energy Flux, Intensity)

Polarized Light (The Wave Equation as an Eigenvalue Problem, The Polarization Ellipse, Linear Polarization, Circular Polarization)

Fresnel Reflection ( $\pi$  polarization,  $\sigma$  Polarization, Total Internal Reflection (TIR))

Light Propagation in Uniaxial Media (The Dielectric Constant Tensor, Solution of Maxwell's Equation for the Propagating Eigenmodes, The Non-propagating Mode, The Ordinary Wave, The Extraordinary Wave)

Dispersion (Dissipation, Dispersion)

Date 03.06.2011

Interference

Diffraction (Single and Double Slit Diffraction, Young Experiment, Diffraction Grating, Holography)

Nonlinear Susceptibility

Gaussian Beams

Date 03.06.2011

### Prerequisites:

Thermodynamics 1 (ANW116) , Thermodynamics 3 (ANK413)

### Contents - short:

Knowledge of link between microscopic, statistical phenomena and macroscopic behaviour of materials.  
Knowledge of cross-effects and their applications

### Bibliography:

- 1) T.L. Hill: "An Introduction to Statistical Thermodynamics",
- 2) A. Bejan: "Advanced Engineering Thermodynamics", John Wiley & Sons, Inc.
- 3) D.V. Ragone: "Thermodynamics of Materials", John Wiley & Sons, Inc.
- 4) Materials for students placed on website

### Course results:

After completing his course the students will be able to understand meaning of the macroscopic properties and specify processes occurring close and far from thermodynamic equilibrium.

### Grading criteria:

solution of two complex problems in statistical and non-equilibrium thermodynamics

### Detailed contents:

Lecture:

1. Fundamentals of kinetic theory of gases and transport theory.
2. Boltzmann equation.
3. Microstate and macrostate.
4. Classical and quantum statistics. Partition function.
5. Statistical interpretation of thermodynamic functions.
6. Local formulation of the 2nd Law of Thermodynamics.

Date 03.06.2011

7. Postulates of the linear non-equilibrium thermodynamics. Generalized forces and fluxes.
8. Onsager's and Curie's principles. Properties of stationary states. Cross-effects.
9. Thermo-diffusion and Dufour effect. Non-equilibrium phase transitions. Wilson line.

Tutorials:

1. Examples of electro-kinetic applications.
2. Examples of thermoelectric applications,
3. Examples of thermionic applications. and thermo-electromagnetic applications.
