

## Warsaw University of Technology

# Faculty of Power and Aeronautical Engineering

# **CATALOGUE OF COURSES**

### Graduate studies (M.Sc. degree) TOK 2006

Warsaw 2011

#### FIELDS OF STUDIES AND SPECIALIZATIONS

The graduate studies last 3 semesters and conclude with the Master of Science degree. They are offered in two specializations. Please see the table below:

Field of Studies	Specialization
Aerospace Engineering	Aerospace Engineering
Power Engineering	Power Engineering

The program of M.Sc. studies is the same for all specializations during the first two semesters. The studies within a particular specialization can be launched when a sufficient number of students have been admitted by the Dean of the Faculty.

Heads of specializations:

- Aerospace Engineering prof. Cezary Galiński
- Power Engineering prof. Tadeusz Skoczkowski

#### Regulations of Studies

Students must comply with the "Regulations of Studies of Warsaw University of Technology" accepted by the University Senate. Please see the following sections for more details. Dean of the Faculty decides in matters not specified by the Regulations.

#### **Course of studies**

From the second semester students must design an individual study plan for next semesters, which includes the obligatory courses, especially the specialization courses that must be repeated, and possibly the courses included in the program for higher semesters of studies.

When designing the individual study plan for the next semester, students must decide on:

- Electives if included in the programme. There is no separate list of electives. An elective can be any course which is not included in the programme of other fields of studies given in English. Dean of the Faculty approves optional electives, e.g. lectured by the Visiting Professors.
- Division and subject of intermediate projects.

# PROGRAM ROZWOJOWY POLITECHNIKI WARSZAWSKIEJ

- Division and scope of diploma seminar. The seminar provides knowledge and skills required in diploma project preparation.
- Division and subject of diploma project. The division is the same as in case of diploma seminar.

Students can also select from a range of foreign language or physical education courses.

Individual study plan for the next semester must be prepared according to the prerequisites given in the catalogue, i.e. courses which must be completed before the beginning of the current course.

After each semester, the student performance is assessed and the registration procedure for the next semester is performed. At the end of the study program all the requirements for graduation must fulfilled.

#### Registration procedures for each semester

#### ECTS Credit System

During each course a certain number of ECTS points are earned in accordance with the course significance, difficulty and the student workload required. The total number of credit points that can be earned for all courses in each semester is 30.

#### Evaluation System

- 1. At the end of each semester, students obtain one final grade for each course (regardless of the course division into lectures, tutorials and laboratory work).
- 2. The grading scale starts with a failing grade 2 and consists of five passing grades: 3,  $3^{1/2}$ , 4,  $4^{1/2}$ , 5.
- 3. In exceptional cases, students may obtain "condition" *N* final grade, which means that the student performance during the semester is evaluated positively, but the student is not allowed to take the final exam (due to valid reasons). The lecturer defines the procedures in case of "condition" *N*. This grade obliges the student to complete the course by the end of the following semester the latest, so that he does not need to repeat it and pay extra fee. If the student fails to complete the course during the following semester, the course must be repeated. Consequently, the student is obliged to cover the costs of the course repetition according to University Regulations. There are no credit points for "condition" *N*.

Requirements for registration for each semester

1. In order to register for the next semester, students are required to have a sufficient number of credit points as given in the table below.

M. Sc. Programme									
Registration for semester	VIII	IX	Х						
Number of collected credits	16	48	80						

- 2. Students who fail to collect the required number of points are removed from the study programme, with the exception of the last two semesters of studies, for which the student can re-register.
- 3. Students must repeat the failed course during the next available semester. Courses can be repeated twice. Students who fail to complete the course three times will be removed from the Faculty. Students are obliged to cover the costs of course repetition according to University Regulations.
- 4. Dean can approve student sick leave or leave of absence. First year students may obtain sick leave only.
- 5. In some cases, the Dean can grant a student who is on the leave, the right to take certain courses "in advance".
- 6. Duration of graduate studies must not be longer than nine semesters. In case the student is granted the leave, duration of studies is prolonged accordingly.
- 7. Surplus credit points accumulated during B.Sc. studies are not transferred to M.Sc. studies. The M.Sc. studies always begin with zero credit points.

#### **Requirements for graduation**

Requirements for graduating with the M.Sc. degree are as follows:

- Completion of all courses in the M.Sc. study program,
- 4-week internship (in industry)
- Collecting 90 ECTS points including the preparation of M.Sc. thesis
- Writing M.Sc. thesis and passing the final exam.

The final grade for the completed study program is an average of grades received for each course. Failing grades are not included in the average.

Average grade = 
$$\frac{\sum_{i \in \mathbb{Z}} g_i \cdot O_i}{\sum_{i \in \mathbb{Z}} g_i}$$

Z – number of completed courses,

 $g_i$  – number of ECTS points allocated to the course,

 $O_i$  – grade for the course.

Final examinations are held four times a year - in January, March, June and October.

#### **Brief study schedule**

Brief study schedule includes information on the course title and the number of hours per semester and week. Information about a course division into lectures, tutorials, laboratory work and projects as well as the number of credit points can be found in a table for each semester.

Complete information about courses can be found in the last part of the catalogue on courses contents.

#### LEGEND for the list of courses (following pages)

In the following section the list of courses is given, divided into suggested sequence during standard semesters of study.

In each semester the standard set of courses gives 30 ECTS points. In the case the required (named and specified) courses do not fill standard 30 ECTS points – then ELECTIVE courses should be taken in the amount summing the semester load to 30 ECTS. Compare remarks on elective courses in the section "Course of Studies".

In the headers of tables the following abbreviations/acronyms are used:

Lc	_	Lecture
т	-	Tutorial
Lb	_	Laboratory
Ρ	_	Project
S	_	Seminar

#### Contents - short:

Types of aircraft engines - spark-ignition engines, diesel engines, turbine engines, ram jet engines, pulse jet engines and detonation engines. Combustion processes in aircraft engines. Methods of visualization and diagnostics of combustion processes. Experience on research stands, testing equipment, data acquisition systems, methods of flame stabilization. Emissions-control technology. Engine-speed and other performance. Getting into the bases of design of the main engine components.

#### **Bibliography:**

- 1. Archer R.D., Saarlas M.: "An Introduction to Aerospace Propulsion", Prentice Hall 1996
- 2. Mattingly J.D.: "Elements of Gas Turbine Propulsion", McGraw Hill 1996
- 3. Mattingly J.D., Heiser W.H., Pratt D.T.: "Aircraft Engine Design", AIAA 2002
- 4. Strehlow R. A. "Combustion Fundamentals", McGraw-Hill, New York 1984.
- 5. A. H. Lefebvre, "Gas Turbine Combustion", Taylor & Francis, USA, 1998

#### **Course results:**

Knowledge of bases of thermodynamics, hydromechanics, gas dynamics and combustion. Knowledge of organization of combustion processes in combustion chamber of different aircraft engines. Practical skills of carried out investigation of piston and turbine engines performance characteristics.

#### Grading criteria:

Assessment will be made on the basis reports realised by students and the short colloquium test at the end of laboratory.

#### **Detailed contents:**

- 1. Types of flames and burners
- 2. Methods of flames stabilization in flow
- 3. Methods of flame visualization in research of combustion processes
- 4. Computer tomography of flames

WARSAW UNIVERSITY OF TECHNOLOGY

Nowowiejska 24, 00-665 Warsaw, POLAND, Room 125 Phone: (+48) 22 621 5310, (+48) 22 234 7354 Fax/Phone: (+48) 22 625 7351 e-mail: dziekan@meil.pw.edu.pl

Date 15.04.2011

**ENGINEERING** 

- 5. Detonation and deflagration
- 6. Investigation of pulsed engine
- 7. Determining of piston engine performances
- 8. Homogeneous charge compression ignition (HCCI)
- 8. Determining of turbine engine performances
- 9. Pulse rotational detonation engine (RDE)
- 10. Summary

#### Additional remarks (by course staff):

As the subject is of interdisciplinary character and is not based on a particular text book, students participation in lectures and exercises is highly recommended.

Lotnictwo i Kosmonautyka	Aerospace Engineering	graduate st time	udies, f	full		1	

#### **Prerequisits:**

Fluid mechanics 1 (ANW122), Thermodynamics 1 (ANW116)

#### Contents - short:

To learn about basic and complex heat transfer mechanisms, as well as fundamental laws governing these physical processes. To introduce several analytical and numerical methods available for solving heat transfer problems. To learn about particular heat transfer processes, important from the point of view of aerospace engineering.

#### **Bibliography:**

1) Cengel Y.A.: Heat and mass transfer, a practical approach, McGraw-Hill, 2007

2) Bejan A., Kraus A.D.: Heat Transfer Handbook, John Wiley & Sons, 2003.

#### **Course results:**

After completing his course the students will be able to identify heat transfer problem, apply proper mathematical model and find the solution; he/she will also understand complex, contemporary heat transfer technology used especially in aerospace engineering

#### Grading criteria:

Three tests during the course; each test contains both theoretical and practical problems,

#### **Detailed contents:**

Basic mechanisms of heat transfer – conduction, convection, radiation; fundamental laws, Thermophysical properties of substances

Conduction: energy conservation equation; physical, boundary and initial conditions,

Steady-state conduction; thermal resistance concept; extended surfaces,

Transient conduction: lumped thermal capacity model, general solution of transient heat conduction, conduction with periodic boundary conditions,

Course level:	advenced		weekly:		[ 0,	0,	0,	0,	<b>2</b> ]
Form of grading:	Exam		by semest	er:	[ 0,	0,	0,	0,	30 ]
Field of Study:	Field of Speci	alization:		Study level:			Re sei	con mes	nmended ter:
Energetyka	-			graduate sto time	udies	, full		3	
Lotnictwo i Kosmonautyka	-			graduate stu time	udies	, full		3	

#### Contents - short:

Gaining skills of information gathering and its critical analysis; learning presentation skills.

#### **Bibliography:**

Books, textbooks, scientific journals, the Internet

#### **Course results:**

Gaining the ability of information gathering, and performing its critical assessment (especially concerning information obtained from the Internet). Learning how to prepare short and concise presentations and how to present in limited time. Learning how to defend a thesis in front of an audience.

#### Grading criteria:

The elements that are subject to evaluation include: the quality of collected information, quality of elaborated analysis, especially the critical discussion of collected data, and quality of the given presentation. It is recommended that the presentation is conducted during a student group meeting, and the students should contribute to its evaluation.

#### **Detailed contents:**

It is recommended that the subject is completed in two steps:

1. Collecting materials on the given subject with the aid of all available information sources: including books, textbooks, journals and the Internet. The collected material must be analysed and summarised in the form of a short report containing references to the literature sources used. This part should be conducted under the supervision of the advisor and its progress must be controlled during individual meetings. An important part of this stage is a critical analysis of the collected material and its relation to the knowledge gained during studies. It is required to use both domestic and international source materials.

WARSAW UNIVERSITY OF TECHNOLOGY

Nowowiejska 24, 00-665 Warsaw, POLAND, Room 125 Phone: (+48) 22 621 5310, (+48) 22 234 7354 Fax/Phone: (+48) 22 625 7351 e-mail: dziekan@meil.pw.edu.pl

Date 15.04.2011

2. Work presentation. Results presentation must be performed in front of a bigger audience during a student group seminar. Each of the students will be given 10-15 minutes of presentation time, followed with questions stated by the seminar participants. This stage is considered preparation to the upcoming thesis defense.

#### Additional remarks (by course staff):

The seminar should be prepared under the supervision of a scientific supervisor. It must follow the diploma thesis themes. The seminar should match the area of studies programme and specialisation.

ENGINEERING

### **SYLLABUS**

Course name: Course name in other language: Short name: Course number: Course language: Responsible for the course: Mechanics of Thin-Walled Structures Wytrzymałość konstrukcji cienkościennych MTS ANS642 English dr inż. Adam Dacko

ECTS:	3	Number of hours:	[ Lc, T,	Lb,	Ρ,	S ]
Course level:	intermediate	weekly:	[ 1, 1,	1,	0,	0]
Form of grading:	Continous assesment	by semester:	[ 15, 15,	15,	0,	0]
Field of Study:	Field of Specialization:	Study level:		Re ser	com nes	nmended ter:
Lotnictwo i Kosmonautyka	Aerospace Engineering	graduate stu time	udies, full		1	

#### **Prerequisits:**

Mechanics of structures 1 (ANW117), Mechanics of structures 2 (ANK427)

#### Contents - short:

To provide engineers insight into specifics of structural analysis of thin walled structures. The course gives foundations of work of thin-walled beams, bending effects in shells, axisymmetrical pressure vessels and structures, buckling and post-buckling analysis

#### **Bibliography:**

- 1. Hearn Mechanics of Materials
- 2. Case, Chilver, Ross Strength of Materials and Structures
- 3. Timoshenko Theory of plates and shells,
- 4. Timoshenko, Gere Theory of elastic stability,
- 5. Gjelsvik The Theory of Thin Walled Bars

#### **Course results:**

After completing his course the students will be able to apply a correct approach for analysis of thin walled structures. That means choose a proper model and analysis methods applying to this model, as well as estimation of obtained results. Critical assessment of outcome of analysis is the basis of sound engineering approach.

#### Grading criteria:

Home assignments, Test problems

#### **Detailed contents:**

Plate bending theory (Kirchhoff). Small and large deflections. Out of plane loads. In plane load – rotating disks and compound pipes. Thin-walled beams – open and closed section.

WARSAW UNIVERSITY OF TECHNOLOGY

Lotnictwo i Kosmonautyka	Aerospace Engineering	graduate stu time	udies,	full	301	3	

#### Prerequisits:

Aircraft Design 1 (ANK307)

#### Contents - short:

Basic knowledge of mathematical methods of optimization Basic skills of formulating and solving of simply optimization problems in aircraft design

#### **Bibliography:**

- 1. D.P. Raymer, Aircraft Design: A Conceptual Approach, AIAA Eductaion Series
- 2. G.N. Vanderplaats: Numerical Optimization Techniques For Engineering Design, McGraw Hill
- 3. Ross Baldick: Applied Optimization, Cambridge University Press, 2006

Selected lectures in electronic form (web site)

#### **Course results:**

After subject is completed student should:

- · have the basic knowledge of mathematical methods of optimization
- · be able to solve simple optimization problems in aircraft design

#### Grading criteria:

Projects and test

#### **Detailed contents:**

Convergent and divergent spiral in design process. Sizing in aircraft design. The most important elements taken under consideration during optimization (geometry, aerodynamics, propulsion system, mission and performance, structure, stability and FCS, etc.) Optimal wing load and thrust load. Optimization in design of specific type of aircraft (combat, firefighting, GA, etc.) Selection of objective function. Mathematical and numerical methods in optimization.

#### Contents - short:

Provide the students with the basic types of PDE's, methods of solving PDE's and their applications. Basic applications can be illustrated during laboratories.

#### **Bibliography:**

Peter O'Neil, Advanced Engineering Mathematics, Wadsworth Publishing Company, USA.

#### **Course results:**

After completing the course the students will be able to specify the type of PDE, solve it, interprete the solutions and implement them in practical problems.

#### Grading criteria:

60% final exam, 40% continuous assessment based on tutorial work. Practical work: e.g., Project/laboratory classes, where students will design and implement a simple poblems in PDE's

#### **Detailed contents:**

- 1. Fourier analysis
- a) the Fourier series of a function; applications to forced oscillation and resonance;
- b) the Fourier integral, sine and cosine integrals; Computer calculations of Fourier coefficients;
- c) Fourier transforms: definition; properties; calculation.

2. PDE's of the first order: the existence of a local solution; linear PDE's; quasi-linear PDE's and their geometrical interpretation.

- 3. Derivation of the wave and heat equation and types of problems.
- 4. The d'Alembert Solutions of the wave equation.
- 5. The Fourier series Solutions of the wave equation.
- 6. The wave equation for semiinfinite and infinite strings.

#### Contents - short:

The student should have a good working knowledge of mathematics, which will be required in order to work problems. The course seeks to provide a reasonable blend of theory (concepts of physics) and problem-solving techniques based on theory. The lectures are primarily concerned with developing the concepts of physics and working through a few problems involving application of these concepts. It is recommended that you keep up with the class on a steady basis and see us if there are things that you do not understand.

#### **Bibliography:**

The reading schedule will be given on the class and continually updated

#### **Course results:**

After completing his course the students will understand the basics of the relativity and the optics. This knowledge gives them possibility to project simple optics components and units.

#### Grading criteria:

The final written exam will be cumulative over all material covered during the semester. (grade: 100% exam)

#### **Detailed contents:**

Relativity Time Dilatation Length Contraction The Lorentz Transformation Relativistic Energy and Momentum Optics

Course name: Course name in other language: Short name: Course number: Course language: Responsible for the course: Physics of the Atmosphere Fizyczne podstawy zagrożeń atmosferycznych PHYSAT ANK321 English dr inż. Tomasz Goetzendorf-Grabowski

ECTS:	1	Number of hours:	[Lc, <sup>-</sup>	T, Lb, P, S	S ]
Course level:	basic	weekly:	[ <b>1,</b> (	), 0, 0, (	C ]
Form of grading:	Continous assesment	by semester:	[ <b>15,</b> (	), 0, 0, (	C ]
Field of Study:	Field of Specialization:	Study level:		Recomn	nended er:

Lotnictwo i Kosmonautyka Aerospace Engineering

graduate studies, full time

#### Contents - short:

Basic knowledge of atmosphere physics Knowledge about atmosphere phenomena, which create the weather Knowledge of phenomena that are danger for aircraft

#### **Bibliography:**

 Selected lectures in electronic form (web site)
 J.D. Andreson – Introduction to Flight, McGraw-Hill , 2004
 Materials available on the website: http://www.meil.pw.edu.pl/add/ADD/Teaching/Subjects/Physics-of-Atmosphere

#### **Course results:**

After subject is finished student should: have the knowledge about basic structure of Earth atmosphere, have the knowledge about atmospheric phenomenas, which impact the weather, have the knowledge about atmospheric phenomenas, which cause danger for flight of aircraft.

#### Grading criteria:

Test

#### **Detailed contents:**

The atmosphere composition. Physical parameters of atmosphere versus height. Winds. Humidity, Clouds and fog. Icing. Storms and cyclones. Wind shear, microburst. Whether in the mountains region. Weather forecast. Turbulence. Mathematical model of atmosphere. Standard Atmosphere. Prevention against atmosphere danger.

ENGINEERING

### SYLLABUS

Course name: Course name in other language: Short name: Course number: Course language: Responsible for the course: Sensors and measurements systems Czujniki i układy pomiarowe SMS ANS511 English dr inż. Krzysztof Gajda

ECTS:	3	Number of hours:	[ Lc, T, I	∟b, P, S	]
Course level:	basic	weekly:	[ 1, 1,	0, 0, 0	]
Form of grading:	Continous assesment	by semester:	[ 15, 15,	0, 0, 0	]
Field of Study:	Field of Specialization:	Study level:		Recomm semester	ended r:
Lotnictwo i Kosmonautyka	Aerospace Engineering	graduate stu time	udies, full	2	

#### Contents - short:

Principles of operation and application of sensors and measurement systems:.

#### **Bibliography:**

- 1) Deobelin E., Measurement Systems Application and Design, 5th edition, 2004
- 2) LabView User Manual, National Instruments
- 3) Mohinder S., Global positioning systems, inertial navigation, and integration, 2001
- 4) Osiander, R., MEMS and microstructures in aerospace applications ", 2006
- 5) Titterton, D., Strapdown Inertial Navigation Technology", 1997

#### **Course results:**

After completing the course students will be able principles of operation and applications of measurement methodology with some hands on experience in laboratory

#### Grading criteria:

80% continuous assessment based on lectures and 20% on laboratory work. 1 test at the end of semester.

Practical work: Laboratory classes, where students will get hands on experience in measurement systems.

#### **Detailed contents:**

Lectures: Sensor and measurement system definition. Measurement system structure. Sensors scaling. Architecture of smart-sensors. A/D and D/A converters. Measurement error and error diminishing methods. Sampling and quantization. Interfaces and data transfer (e.g. CAN, RS232-485) Laboratory:Measurement methodology, using LabVIEW® in practice. Error and accuracy determination.

### SYLLABUS

Course name:	Signals ar	nd identification methods					
Course name in other language	ge: Teoria prz	Teoria przetwarzania sygnałów i identyfikacja					
Short name:	SIM						
Course number:	ANK495						
Course language:	English						
Responsible for the course:	prof. dr ha	ab. inż. Janusz Narkiewicz					
ECTS:	3	Number of hours:	[ Lc, T, I	Lb, P, S]			
Course level:	basic	weekly:	[ 1, 1,	0, 0, 0]			
Form of grading:	Continous assesment	by semester:	[ 15, 15,	0, 0, 0]			
Field of Study:	Field of Specialization:	Study level:		Recommended			
Lotnictwo i Kosmonautyka	Aerospace Engineering	graduate st time	udies, full	2			

#### Contents - short:

The background of methods for building reliable models of various systems and their components. System identification methods. Basic signal processing.

#### **Bibliography:**

1. Klein V., Morelli E.A., "Aircraft System Identification Theory and Practice", AIAA Educational Series, 2006.

web site materials.

#### **Course results:**

Ability to implement the suitable methods for signal processing, model building and its parameter identification and estimation.

#### Grading criteria:

Tests during semester. Project - application of selected identification methods. Self study - Matlab / Simulink programming skills adequate for completing homework.

#### **Detailed contents:**

Lecture: Basic definitions: signal, model, identification, estimation. Deterministic and stochastic signals. Transformation from time to frequency domain. Analog / Digital conversion. Filters: analog and digital, filter optimization. Signal coding. Modelling of static and dynamic processes. Estimation theory. The least squares method for estimation. Experiment planning. Data processing errors and their estimation. Tutorials: Examples of topic presented during lectures.

### SYLLABUS

Course name:	5	Space Techno	logies					
Course name in other language	ge:							
Short name:	5	STECH						
Course number:		ANK398						
Course language:	E	English						
Responsible for the course:	C	dr inż. Arkadiu	ısz Kobiera					
ECTS:	2		Number of hours:	[ Lc,	T, L	b,	P,	S]
Course level:	basic		weekly:	[ 2,	0,	0,	0,	0]
Form of grading:	Exam		by semester:	[ 30,	0,	0,	0,	0]
Field of Study:	Field of Specia	lization:	Study	level:		Rec sen	com nes <sup>:</sup>	mended ter:
Lotnictwo i Kosmonautyka	Aerospace En	gineering	gradua time	ate studies,	full		1	

#### **Prerequisits:**

Astronautics (ANK468), Astronautyka (NK468)

#### Contents - short:

Aquisition of knowledge about main principles of spacecraft design, space mission course and ground segment

#### **Bibliography:**

1. P. Fortescue, J. Stark and G. Swinerd, Spacecraft systems engineering, Wiley, Chichester, 2007

- 2. C. D. Brown, Elements of spacecraft design, AIAA, Reston, 2002
- 3. Written materials on the Department's Web site.

4. Further Readings: Aviation Week, Lotnictwo, Postępy Astronatuki, and other scientific and popular science journals

#### **Course results:**

Determining of requirements for spacecraft in respect to kind of space mission; Calculation of parameters of orbits; Calculation of basic parameters of satellite and launcher subsytems

#### Grading criteria:

Exam

#### **Detailed contents:**

Space environment; Orbit parameters; Spacecraft as a technical system; Launchers, Main subsystem of satellites: mechanical structure, mechanisms, power system, thermal system, attitude and orbit control systems, telemetry and control systems; Manned spacecrafts; Ground stations; Applications of space technology

### SYLLABUS

Course name: Course name in other language: Short name: Course number: Course language: Responsible for the course: Structural analysis of aero engines Strength of engines SAAE ANS650 English prof. dr hab. inż. Marek Żochowski

ECTS:	4	Number of hours:	[ Lc,	Τ,	Lb,	Ρ,	S ]
Course level:	advenced	weekly:	[ <b>2</b> ,	0,	0,	0,	0]
Form of grading:	Continous assesment	by semester:	[ 30,	0,	0,	0,	0]
Field of Study:	Field of Specialization:	Study level:		Re ser	com nes	nmended ter:	
Lotnictwo i Kosmonautyka	Aerospace Engineering	graduate sti time	udies,	full		2	

#### **Prerequisits:**

Mechanics of structures 1 (ANW117), Mechanics of structures 2 (ANK427)

#### Contents - short:

Loadings: mechanical, thermal, vibrations. Strength requirements, materials and its mechanical properties as a function of temperature. Methods of strength calculations of blades, rotating discs, circular plates, cylindrical shells mechanically and thermally loaded. Bending and torsional vibrations.

#### **Bibliography:**

 Bijak-Żochowski M., Jaworski A., Krzesiński G., Zagrajek T.: Mechanika Materiałów i Konstrukcji, Oficyna Wydawnicza Politechniki Warszawskiej, Warszawa, 2006.
 Brzoska Z.: Wytrzymałość Materiałów, PWN, Warszawa, 1979.
 John Hearn "Mechanics of Structures"

#### **Course results:**

Ability of strength calculations of aircraft engines elements within elastic range.

#### Grading criteria:

Homeworks, examination

#### Additional remarks (by course staff):
